

Z7-IO

Traditional enclosure for A45 modules

General

The Z7-IO enclosure provides a protective means of surface mounting a single, A45 module.

Easy installation

Designed for first and second fix installation, the Z7-IO comprises an open back box containing all wiring terminals together with a front plate of high impact plastic.

A-series modules are clipped to the DIN rail mount on the reverse of the front plate and connected to the back box wiring terminals by means of flying leads that is supplied with the unit. After installation the two parts simply plug together.

To aid identification an indent is moulded into the front plate of the enclosure for applying an address label.

Details

- Common enclosure for A45 modules
- Flying lead connection for retrofit connection
- Clip in DIN rail fixing for easy mounting
- Address label indent provided
